

Why to collaborate with SAV?

SAV is a large company founded in 1900, which conducts its activity in the environmental sector, and in the recent years has decided to diversify its activities by expanding into bioproducts markets.

SAV operates in more than 20 municipalities. Since 2005, SAV is in charge of the cleaning and waste collection of the southern area of Valencia.

SAV operates the most modern plant of sorting waste in Valencia. This plant currently processes 264 Tm daily. Only around a third part of the processed waste goes to the landfill.

SAV manages the purification and treatment of wastewater in more than 200 wastewater treatment plants.

SAV has different lands and crops to use as AgroLabs.

SAV department of R&D and European projects is formed by a multidisciplinary team of doctors in science and engineering as well as technical experts in ICT, circular economy, agriculture, food, water purification and many other disciplines. Our team works actively managing environmental projects and developing project proposals through the H2020 instrument, and is certified in the project management methodology Prince2® and Agile.
